103 <b>Lr</b> lawrencium [262]	

Notes:

- Source: International Union of Pure and Applied Chemistry, [http://www.iupac.org/reports/periodic\\_table/](http://www.iupac.org/reports/periodic_table/).
- Atomic masses are given in units of g mol<sup>-1</sup> and are listed to two decimal places except where there is a large uncertainty. For elements with stable or long lived nuclides, the values given correspond to those known for the elements in natural terrestrial sources. For other elements, the mass number for the nuclide of longest known half-life is given in square brackets.
- Some elements with atomic numbers 112 and above have been reported but not fully authenticated.
